Profile

Software Developer with background in web development and experience providing technical support for automated systems. For more than two years I monitored industrial systems controlled by PLCs and queried SQL databases to diagnose operational issues. Currently focused on building modern web applications using JavaScript, TypeScript, React and Node.js, with interest in backend development, system architecture and scalable APIs.

Experience

Technical Support – Automated Systems, Industrial Automation Company Jan 2022 – Jan 2024

- Monitoring and technical support of PLC-based automated systems.
- Troubleshooting industrial processes and operational incidents.
- Querying operational data using SQL databases.
- Customer support for resolving technical issues.
- Collaboration with technical teams to ensure operational continuity.

Projects

Nautical Management System

- Web application for managing clients and boats.
- Frontend developed using React and TypeScript.
- Backend built with Spring Boot implementing a REST API.
- PostgreSQL database for managing clients and boats.
- Full CRUD operations implemented.
- Team collaboration using Git.

Brekky – Social Web Platform

- Web platform where users can create profiles and participate in a community forum.
- Post system allowing users to upload photos and comment on other posts.
- Recommendation bot focused on healthy lifestyle and fitness questions.
- Admin panel to manage products, posts and forum moderation.
- Product catalog for coffees and desserts.
- Developed with PHP and Twig using MVC architecture.
- Local development environment configured with Laragon.

Education

IES Santa Fe, Software Development Degree

Jan 2023 – Jan 2025

Skills

Languages: JavaScript, TypeScript, SQL

Frontend: React, HTML, CSS, Tailwind, Astro

Backend: Node.js, REST APIs, Spring Boot, PHP

Databases: PostgreSQL, MySQL

Tools: Git, GitHub, Vercel, Docker (basic)

Languages

Spanish - Native

English - Pre-Intermediate
