PROFESSIONAL SUMMARY

Junior software developer with a background in web development (JavaScript, TypeScript, React, Node.js) and over two years of prior experience in technical support for PLC-controlled industrial automation systems, including process diagnostics and SQL queries against operational databases. I bring a solid foundation in version control (Git), REST API architecture, and collaborative work, combined with proven troubleshooting skills in production environments. Looking to join a development team where I can contribute across frontend, backend, or advanced technical support.

WORK EXPERIENCE

Technical Support — Automated Systems — Industrial Automation Company *Jan 2022 – Jan 2024*

- Monitored and provided technical support for PLC-controlled automated systems, ensuring operational continuity across industrial processes.
- Diagnosed and resolved faults in industrial processes, prioritizing incidents by production impact.
- Queried and analyzed operational records and data via SQL for process diagnostics.
- Provided technical support and customer service for first- and second-level incident resolution.
- Coordinated with cross-functional technical teams to ensure system availability and performance.

PROJECTS

Pharmacy Queue Management System *Personal project*

- Queue/turn management system with a public waiting-room display and a real-time admin panel.
- Real-time turn calling via WebSockets (Socket.IO); peak-hour analytics, cashier performance stats, and Excel export.
- Desktop application built with Tauri and React/TypeScript; backend with NestJS, Prisma, and PostgreSQL.

Biotelek — Corporate & Sales Website *Freelance project*

- Redesigned the corporate website for Biotelek, exclusive Argentine distributor of Meditech Pharma robotic logistics solutions.
- Multi-language site (Spanish, English, Portuguese) with a flag-based language switcher and an integrated WhatsApp contact button.
- Sections for company history, product catalog, queue booking, and contact.

Marina Management System *Personal / academic project*

- Full-stack web application for managing customers and boats with complete CRUD operations.
- Frontend built with React and TypeScript; backend built with Spring Boot exposing a REST API.
- Data persistence in PostgreSQL; collaborative version control with Git.

Brekky — Social Web Platform *Personal project*

- Social platform with user profiles, a community forum, and a post system with photos and comments.
- Recommendation bot for healthy eating and training.
- Admin panel for managing product catalog, posts, and content moderation.
- Built with PHP + Twig using an MVC architecture; development environment set up with Laragon.

EDUCATION

Associate Degree in Software Development — IES Santa Fe *Jan 2023 – Jan 2025*

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL

Frontend: React, HTML5, CSS3, Tailwind CSS, Astro

Backend: Node.js, REST APIs, Spring Boot, NestJS, PHP (MVC)

Databases: PostgreSQL, MySQL

Tools & practices: Git, GitHub, Docker, Vercel, version control, collaborative workflows

Industrial / support: PLC systems, automated process diagnostics, help desk

LANGUAGES

Spanish: Native

English: Pre-Intermediate (technical reading of documentation and code)
